Study Guide and Reinforcement - Answer Key

Operant conditioning is a method of learning that occurs through rewards and punishments for behavior. Through operant conditioning, an individual makes an association between a particular behavior and a consequence. B.F Skinner is regarded as the father of operant conditioning and introduced a new term to behavioral psychology, reinforcement.

B.F. Skinner | Operant Conditioning | Simply Psychology

the coating factor, Ψ_e , is taken as 1.2 for epoxy-coated reinforcement In accordance with ACI 318-14 7.7.3.3 and 9.7.3.3, the extension length used for this Code is the maximum of $12d$ or effective depth of the member, taken as the maximum vertical distance from the center of the reinforcing bar to the farthest concrete surface.

ACI 318-14 Development Lengths

Rather than reinforcing the behavior each and every time it occurs, the reinforcement is given only after a certain amount of time has elapsed or a certain number of responses have occurred. This sort of partial schedule results in behavior that is stronger and more resistant to extinction.
