The role of dam engineers has greatly changed over the past decades. Thanks to new technologies, the surveillance, monitoring, design and analysis tasks involved in this process have significantly improved.

Infrastructures | Special Issue : Advances in Dam Engineering

Particularly guaranteeing a high dam and big reservoir without the occurrence of dam failure and disaster variation has become a strategic priority in the current water resources and hydroelectric power engineering earthquake resistance, of which high arch dam body-reservoir water-foundation system seismic response analysis and aseismic safety assessment are the key to seismic disaster quantitative judgment.
