Explanation:

Conduction occurs when heat is transferred by direct contact between two objects. Convection occurs when heat is transferred via contact between a fluid and an object. Radiation is heat transfer via electromagnetic radiation. In this question, the fire is a source of heat and electromagnetic radiation.

transfers can take the form of force, electricity, light, heat and sound and are never without some energy "loss" during the process. Two real-world examples of engineered systems—light bulbs and cars—are examined in light of the law of conservation of energy to gain an understanding of their energy conversions and
