Differential geodesy is concerned with the geometry of the gravity field of the Earth, which is of fundamental importance to both theoretical geodesy and geophysics. This monograph presents a unified treatment of the foundations of differential geodesy as proposed originally by Antonio Marussi and Martin Hotine in their work.

Readers eager to learn more differential geometry and about manifolds are referred to doCarmo, Berger and Gostiau x, Lafontaine, and Gray. A more complete list of references can be found in Section 20.11. By studying the properties of the curvature of curves on a surface, we will be led to the first and second fundamental forms of a surface.

Geodesy (/ dʒi: 'ɒ dɪ s i /) is the Earth science of accurately measuring and understanding Earth's geometric shape, orientation in space and gravitational field. The field also incorporates studies of how these properties change over time and equivalent measurements for other planets (known as planetary geodesy). Geodynamical phenomena include crustal motion, tides and polar motion ...

Differential GPS involves the cooperation of two receivers, one that's stationary and another that's roving around making position measurements. Where to get Differential Corrections Many new GPS receivers are being designed to accept corrections, and some are even equipped with built-in radio receivers. Differential Code Biases (DCBs) are the systematic errors, or biases, between two GNSS code observations at the same or different frequencies. DCBs are required for code-based positioning of GNSS receivers, extracting ionosphere total electron content (TEC), and other applications.

geodesy in the discipline which we call differential geodesy. Chapter II -- Conformal Geometry -- is a self-contained introduction and systematic exposition of conformal geometry, i.e., the geometry of a pair of N -dimensional Riemannian spaces V and V which are related by a conformal VN N transformation.
