Epilepsy Problem Solving In Clinical Practice PDF

Epilepsy is a complex disease that includes seizures that may or may not be active. Recognizing comorbidities can improve health and quality of life outcomes. People with epilepsy who continue to have seizures during treatment with the first or second medication should be referred to a comprehensive epilepsy center.

Evidence-based epilepsy care - American Nurse

Absence seizures. Absence seizures, previously known as petit mal seizures, often occur in children and are characterized by staring into space or by subtle body movements, such as eye blinking or lip smacking. These seizures may occur in clusters and cause a brief loss of awareness. Tonic seizures. Tonic seizures cause stiffening of your muscles.

Seizures - Symptoms and causes - Mayo Clinic

Some people with epilepsy simply stare blankly for a few seconds during a seizure, while others repeatedly twitch their arms or legs. Having a single seizure doesn't mean you have epilepsy. At least two unprovoked seizures are generally required for an epilepsy diagnosis.

Epilepsy - Symptoms and causes - Mayo Clinic

Epilepsy self-management has been defined as the steps or behaviors people with epilepsy use to manage their seizures, treatments and the impact of epilepsy on their daily lives. Self-management is a critical part of patient-centered care because it involves the person with epilepsy, their loved ones, and healthcare providers.

Epilepsy and cognition - ScienceDirect

Epilepsy is a chronic disorder that causes unprovoked, recurrent seizures. ... memory problems; Rare, but serious side effects include depression and inflammation of the liver or other organs.

Epilepsy: Causes, Symptoms, Treatment, and More

Fifty-eight percent of children with new-onset epilepsy do not take their antiepileptic drugs (AEDs) as prescribed (i.e., non-adherence). Non-adherence, which is modifiable, is associated with continued seizures, mortality, poor quality of life, and high healthcare costs. There are no adherence interventions for young children with epilepsy and their families; thus, the current proposal examines a family-based behavioral treatment focused on improving epilepsy knowledge
