For a website, we might use HTML and CSS, but for an API we would use JSON or XML. In this article I will be focusing on designing an API using the RESTful paradigm. REST is basically a list of design rules that makes sure that an API is predictable and easy to understand and use. Some of these rules include:

A RESTful API is an application program interface (API) that uses HTTP requests to GET, PUT, POST and DELETE data. An API for a website is code that allows two software programs to communicate with each other. The API spells out the proper way for a developer to write a program requesting services from an operating system or other application.
